ABOUT EXTENSION ARCHITECTURE

WHO ARE WE?

Extension Architecture is an architectural planning practice. Through all our stages of planning and design, we work with an experienced team of planners, architectural and interior designers and engineers to help the client achieve the best possible solution in design for their proposed works. Our approach to work is to achieve client satisfaction and approval.

WHAT WE DO?

Our consultants and design team devise practical and creative planning proposals to help you devise drawings for all types of planning applications, permitted developments and building regulations. Whether you want to develop a plot of land, extend your property, home alterations or just wanting expert advice in maximising and comprehending the potential of your space; at Extension Architecture we can make your dreams a reality. We create functional, aesthetic, practical and cost engineered plans to suit your budget.

SUCCESS RATE

Having worked in the planning sector for a number of years, we have built relationships and liaise regularly with the local authorities building an understanding of their requirements and standards.

In our team of up to 10 architectural designers we have submitted 500+ planning applications (and still going!). We are proud to say that we have a success rate of 95% of decisions approved. Therefore any queries we are the specialists to help advise and move you forward.
